## Instructions

^ COLLAPSE ^

1. Visit w3schools and go to the PHP Tutorial: <https://my-learning.w3schools.com/tutorial/php>
2. Complete the following readings
  1. Introductions Lessons 1.1 - 1.6
  2. Variables 2.1 - 2.2
  3. Echo/Print 3.1
  4. Data Types Lessons 4.1 - 4.5
  5. String Lessons 5.1 - 5.5
  6. Operators and Math Lessons 6.1 - 6.2
  7. Conditionals Lessons 7.1 - 7.6
  8. Loops Lessons 8.1 - 8.7
  9. Functions Lessons 9.1
  10. Arrays Lessons 10.1 - 10.10

## Guide:

1. Make sure you're in the main branch locally (`git checkout main`) and `git pull origin main` any pending changes
2. Make a new branch per the recommended branch name below (`git checkout -b ...`)
3. Fill in the items in the worksheet below (save as often as necessary)
4. Once finished, export the worksheet
5. Add the output file to any location of your choice in your repository folder (i.e., a Module2 folder)
6. Check that git sees it via `git status`
7. If everything is good, continue to submit
  1. Track the file(s) via `git add (name_of_file)`
  2. Commit the changes via `git commit -m "some summary of the work"` (don't forget

2. Commit the changes via `git commit -m "some summary of the work"` (don't forget the commit message)
3. Push the changes to GitHub via `git push origin (the_branch_name)` (don't forget to refer to the proper branch)
4. Create a pull request from the homework related branch to main (i.e., `main <- "homework branch"`)
5. Open and complete the merge of the pull request (it should turn purple)
6. Locally checkout main and pull the latest changes (to prepare for future work)
8. Take the same output file and upload it to Canvas

^ COLLAPSE ^

Columns: 1

Sub-Task

Group: Reflection

Task #1: Reflect on the following topics

Sub Task #1: What concepts/topics were totally new to you?

## ≡ Task Response Prompt

*Mention specific concepts/topics*

Response:

The fact that function names are not case-sensitive is strange to me. In every other programming language, I always had to be careful about my capitalization. However, in PHP it doesn't matter, which is going to cause confusion in the future. For example, ECHO "hello world", echo "hello world" and eCHO "hello world" are all valid.

Sub-Task

Group: Reflection

Task #1: Reflect on the following topics

Sub Task #2: What concepts/topics were you already familiar with?

## ≡ Task Response Prompt

*Mention specific concepts/topics*

Response:

I was already familiar with most of the concepts in this reading. PHP is very similar to many programming languages I gave used before.

Sub-Task

Group: Reflection

Task #1: Reflect on the following topics

Sub Task #3: What topics do you still not feel confident about? If confident, explain why.

## ≡ Task Response Prompt

*At least a few reasonable sentences.*

Response:

I'd say I am confident considering how similar PHP is to Java and Python. I would just need to remember the new syntax rules.
